

BRAND STRATEGY PORTFOLIO

Experience, Verified.

A PRODUCT OF PHEXARA LTD

Formerly known internally as VEEP the Verified Enterprise Experience Platform

PREPARED FOR: FOUNDERS · BRAND & MARKETING · PRODUCT & ENGINEERING · AGENCY PARTNERS

VERSION 1.0 · JULY 2026 · CONFIDENTIAL

DOCUMENT CONTROL

Confidentiality & Document Control

This document is classified CONFIDENTIAL under Phexara Ltd information-handling policy. It defines the complete brand system for Vet2Mploy naming, narrative, visual identity, voice, messaging, audience strategy, product-experience branding, channel application, and governance and must not be circulated outside the distribution list below without written approval from Phexara's founding team.

Distribution

- Founders and executive leadership, Phexara Ltd
- Vet2Mploy product, engineering, and design leadership
- Marketing, growth, and content teams (in-house and contracted)
- External design, development, and media agencies engaged on Vet2Mploy work
- Investors and incubator partners, on request only

HOW THIS DOCUMENT RELATES TO THE PHEXARA MASTER PORTFOLIO

Phexara Ltd's master brand portfolio governs the parent company's identity across all of its disciplines and platforms. This document is the product-level counterpart for Vet2Mploy: it inherits Phexara's governance model and document structure, but defines a visual and verbal identity specific to Vet2Mploy's own logo, audiences, and category. Where the two documents overlap for example, co-branding rules this document is authoritative for anything carrying the Vet2Mploy mark.

FRONT MATTER

Foreword & How to Use This Document

Vet2Mploy exists to solve one problem: a candidate can be genuinely capable and still have no way to prove it before an employer takes a chance on them. Every certificate is a claim. Every CV is a claim. Vet2Mploy replaces the claim with evidence a simulated role, a real deliverable, a transparent score, and a tamper-proof profile an employer can actually verify. This document exists so that every person who touches the Vet2Mploy name inside Phexara or outside it tells that story the same way, in the same voice, under the same mark.

This portfolio is written as a working reference, not a manifesto to be read once and filed away. It is organised the way a designer, a copywriter, a growth marketer, or a new employer partnerships lead would actually need it: foundations first, then positioning, then the visual system built directly around the Vet2Mploy logo, then voice, messaging, audience, product-experience branding, channel-by-channel application, and finally the governance model that keeps all of it consistent as the platform scales from three roles to thirty and from three markets to more.

Who Should Read What

Role	Read first
Founders & leadership	Executive Summary, Ch.1 Brand Foundations, Ch.9 Governance
Designers & agencies	Ch.3 Visual Identity System, Appendix B Quick Reference Card
Copywriters & content	Ch.4 Voice & Tone, Ch.5 Messaging Architecture, Appendix E Style Sheet
Growth & performance marketing	Ch.6 Audience Strategy, Ch.8 Channel Application
Product & engineering	Ch.7 Product & Experience Branding
New hires & new agencies	Appendix F Onboarding Checklist, then the whole document

A Note on the Name Change

Internally, this product was built and is still referenced in engineering documentation as VEEP. Vet2Mploy is the public-facing brand under which it launches, is sold, and is marketed. Engineering artefacts, internal Jira tickets, and architecture documents may continue to reference VEEP as a codename; nothing customer-facing no screen, no email, no invoice, no webhook payload visible to a partner should carry the VEEP name once this portfolio is adopted. Section 1.6 sets out the full naming rationale and the transition rules in detail.

FRONT MATTER

Executive Summary

Vet2Mploy is Phexara's verified-experience platform: a three-sided marketplace in which candidates complete AI-managed simulations of real jobs, employers hire against evidence instead of guesswork, and enterprise partners assess talent at scale through a direct API. Where the underlying engineering has been documented under the working name VEEP, Vet2Mploy is the brand the market will meet on the landing page, in the candidate's browser tab, on the employer's invoice, and inside every webhook payload an enterprise partner receives.

This portfolio sets out five things, in order: what Vet2Mploy is for and why it exists (Brand Foundations); where it sits against certificates, badges, and technical-assessment tools (Market Positioning); how it looks, built entirely around the supplied Vet2Mploy mark rather than around Phexara's own hexagon-phoenix system (Visual Identity); how it sounds across three very different audiences (Voice & Tone, Messaging Architecture); and how the platform's own product experience the Verified Profile, the simulation workspace, the pricing tiers becomes a branded, ownable part of the story rather than a generic SaaS interface (Product & Experience Branding, Channel Application).

The Five Decisions This Portfolio Is Built Around

1. The Vet2Mploy mark is the anchor, not Phexara's phoenix. Every visual decision in Chapter 3 colour, type, imagery, motion is derived from the supplied logo: its dark ground, its chrome-silver dual-chevron icon, and its light, wide-tracked wordmark. Phexara's own colour system is not reused.

2. “Verified” is the single word the brand must own. Every audience candidate, employer, API partner ultimately buys the same thing: a credible signal that reduces their risk. Messaging Architecture (Ch.5) is structured so that word survives translation into three very different value propositions.

3. The product experience is the brand's biggest asset. A Verified Profile URL, an AI persona's in-character response, and a JSON score report are all touchpoints an outside person will see before they ever visit vet2mploy.com. Chapter 7 treats these as first-class brand surfaces, not just UI.

4. Three audiences, one trust architecture. Candidates, employers, and API partners have different needs but must never feel like three different companies. Chapter 6 defines the segments; Chapter 5 keeps the tone of voice consistent across them.

5. Governance has to survive rapid iteration. Vet2Mploy's own roadmap adds a new role, a new market, or a new pricing tier roughly every four weeks through Month 7. Chapter 9 sets out a lightweight approval model built for that cadence, not for a slow annual brand refresh.

What Changes for the Reader Immediately

- Stop writing or designing anything customer-facing under the name “VEEP.” Use Vet2Mploy, styled exactly as set out in Section 3.1.
- Anchor every new asset to the supplied logo lockup dark ground, chrome icon, light wordmark rather than to Phexara's violet-and-hexagon system.
- Use the channel colours defined in Section 3.4 (Signal Cyan for Candidate, Momentum Amber for Employer, Verified Emerald for API Partner) to keep the three-sided marketplace legible at a glance, in decks, in the product, and in paid media.
- Refer to the platform's core deliverable as the Verified Profile, not a “certificate,” a “course badge,” or a “score report” in isolation see the Word & Phrase Style Sheet in Appendix E.

01

Brand Foundations

Origin, mission, vision, core values, and the essence Vet2Mploy protects at every size.

01 · BRAND FOUNDATIONS

Brand Origin & Narrative

Vet2Mploy began as an internal engineering programme at Phexara Ltd called VEEP the Verified Enterprise Experience Platform. The insight behind it was simple and uncomfortable: the hiring market has spent two decades getting better at filtering CVs and worse at telling whether the person behind the CV can actually do the job. Coding tests measure a narrow slice of ability under artificial pressure. Certificates measure attendance, not output. Internships measure privilege as much as promise most people who need one most cannot afford to take one.

Phexara's founding team built VEEP to close that gap with something more honest than a score: a simulated employer, a simulated team, and a simulated set of real deliverables a security report, a piece of working code, a business analysis, a marketing brief assessed the way a real manager would assess them, then bound to a profile the candidate can hand to an actual employer with confidence. As the product moved from engineering prototype toward public launch, it needed a name and a visual identity that a candidate, an employer, and an enterprise buyer could all understand in under three seconds. That is Vet2Mploy.

Why “Vet2Mploy”

The name is built from two ordinary words candidates and employers already use, joined the way a URL or a handle is joined: Vet as in to vet someone, to check them properly before you trust them and Mploy, a compressed, digital-native spelling of employ. Read together, “Vet2Mploy” reads out loud as “vet to employ”: the exact sequence the platform performs. It is deliberately not a coined, abstract word like many category-defining platforms choose; the goal is instant comprehension over cleverness, because the product's entire value proposition depends on being immediately legible to a hiring manager scanning a candidate's profile link for the first time.

- Vet the verification act at the centre of the product: rubric scoring, LLM evaluation, tamper-proof evidence.
- 2 a digital-native connector, signalling direct movement from one state to the next: unverified to verified, candidate to hire.
- Mploy employment, the outcome every audience is ultimately buying toward.
- Read together a plain-English promise, not an invented word requiring explanation on a landing page.

A Note on the Numeral “2”

The digit sits inside the wordmark, not beside it, and should always be set in the same weight and case treatment as the surrounding letters never as a superscript, never in a contrasting colour. It is a letterform, not a decorative flourish. Section 3.1 gives the full construction rule.

01 · BRAND FOUNDATIONS

Mission

> **“To replace the claim on a CV with evidence an employer can actually verify so that ability, not access, decides who gets hired.”**
>
> **Vet2Mploy mission statement**

Vet2Mploy's mission is operational, not aspirational: every product decision is tested against whether it makes a candidate's evidence more credible or an employer's hiring decision less risky. That mission sits underneath all three sides of the marketplace. For a candidate without a network, an internship, or a first job, Vet2Mploy is the fastest legitimate route to something an employer will read. For an employer drowning in unverifiable CVs, it is a way to see real, scored, evidenced work before the first interview is even booked. For an enterprise API partner, it is infrastructure that plugs verification directly into an existing applicant-tracking workflow, at scale, without building an assessment team from scratch.

What the Mission Rules Out

- Vanity credentials. A Vet2Mploy score is not decorative; every claim on a Verified Profile must trace back to a stored, hashed artefact an employer can inspect.
- Pay-to-pass mechanics. Subscription tiers control access to roles and volume, never the honesty of the score itself the rubric engine and the LLM evaluator are blind to which pricing tier a candidate is on.
- One-size-fits-all assessment. A cybersecurity analyst and a brand strategist are not scored on the same rubric, and the brand must never flatten that distinction in its language.

01 · BRAND FOUNDATIONS

Vision

In five years, a Verified Profile issued by Vet2Mploy should be as instantly recognisable to a hiring manager as a verified badge is on a social platform today proof that stops the scroll, not decoration on it. The long-run vision is for Vet2Mploy to become the default proof-of-work layer sitting between education and employment across the roles the platform covers: technical roles first, then the non-technical disciplines the roadmap adds from Month 5 onward, then new geographies as market-entry playbooks mature in Canada, Australia, and beyond.

That vision has a deliberately narrow definition of success. Vet2Mploy does not aim to replace interviews, reference checks, or human judgement it aims to make the information available before those steps happen dramatically more honest. The brand should never overreach into promising outcomes the product does not control, such as guaranteeing a hire; Section 5.6 sets out how the Word & Phrase Style Sheet enforces that discipline in every piece of outbound copy.

Three Horizons

Horizon	What “winning” looks like
Now Parallel MVP (M1–M4)	Three technical roles live, verified profiles trusted by a first cohort of employer partners, brand consistently applied across a small but fast-moving surface area.
Next Non-Technical Expansion (M5–M7)	Vet2Mploy recognised across technical and non-technical hiring alike; API Assessment product live with enterprise clients; brand withstands a much larger content and channel footprint.
Later Category Ownership	“Verified Profile” and “Vet2Mploy score” used generically by hiring managers the way “LinkedIn profile” is used today; brand licensed confidently into new markets and new role categories.

01 · BRAND FOUNDATIONS

Core Values

Vet2Mploy inherits Phexara's commitment to engineering discipline and ethical foundation, but expresses six values of its own each one a direct response to a specific risk in the verified-experience category. These are not wall art; each value below maps to a concrete rule enforced elsewhere in this portfolio or in the product itself.

1. Evidence Over Claims

Every statement about a candidate on a Verified Profile must be traceable to a stored artefact a submitted report, a piece of code, a scored transcript. The brand never lets marketing language get ahead of what the platform can actually prove.

Enforced by: SHA-256 hashing on every submission (Ch.7); Style Sheet ban on unverifiable superlatives (Appendix E).

2. Rigour Without Gatekeeping

The bar for a good score stays high and consistent the rubric engine is deterministic for a reason but the door to attempt a simulation stays open regardless of a candidate's background, network, or prior credentials.

Enforced by: role catalogue open to all registered candidates; pricing tiers gate volume and features, never assessment honesty.

3. Dignity of the Candidate

A candidate who scores poorly on a task should still leave the simulation with narrative feedback that treats them as capable of improving, never with language that is dismissive, sarcastic, or gamified in a demeaning way.

Enforced by: AI persona tone rules (Ch.4); no public leaderboards ranking candidates against one another.

4. Employer Trust as the Moat

Candidates are the supply side of the marketplace; employers are the revenue and the credibility signal. No feature ships, and no message runs, that would let a candidate manufacture a stronger score than their work supports.

Enforced by: Founder Decision 05 (source document); tamper-proof CloudTrail audit log on every profile.

5. Radical Transparency in Scoring

A candidate and an employer should be able to see, in plain language, why a score is what it is which rubric criteria passed, which did not, and what the AI evaluator's narrative feedback actually said.

Enforced by: Profile Viewer competency radar and artefact viewer (Ch.7); no hidden scoring weights in outward-facing copy.

6. Global by Design

Cultural context is injected into every simulation from the first market the platform does not treat the UK build as the template and other regions as an afterthought.

Enforced by: Cultural Onboarding step in the candidate journey (Ch.6); regional considerations in Ch.6.2.

01 · BRAND FOUNDATIONS

Brand Essence

> **BRAND ESSENCE**
> Proof of Work, For Work.

If every other page of this portfolio were lost, this is the sentence that should survive: Vet2Mploy exists to turn work someone actually did into proof someone else can trust. Everything about how the brand looks and sounds should reinforce that essence the dark, precise, almost instrument-panel visual language (Ch.3) signals rigour and technical seriousness rather than the softer, gamified tone of a learning platform; the voice (Ch.4) is direct and specific rather than motivational; and the product's own interface, from the Monaco code editor to the JSON score report, is treated as brand evidence in its own right, not hidden behind marketing polish.

Essence in One Line, by Audience

Audience	The essence, in their words
Candidate	“I can finally show what I can do, not just what I've been told to say I can do.”
Employer	“I'm hiring against evidence I can check, not a CV I have to take on faith.”
API Partner	“I get structured, defensible assessment data inside my own hiring workflow, on demand.”

01 · BRAND FOUNDATIONS

Brand Personality Traits

Vet2Mploy's personality is calibrated to sit between a serious enterprise software brand and an approachable careers platform closer to the former, because employer trust is the moat, but never cold, because a candidate is often nervous and under-resourced when they arrive.

Trait	Vet2Mploy is…	Vet2Mploy is not…
Rigorous	Precise about what a score means and does not mean	Loose with superlatives or unverifiable claims
Direct	Plain-English about process, pricing, and outcomes	Jargon-heavy or evasive about how scoring works
Encouraging	Respectful of a candidate's effort, even on a low score	Falsely inflating, gamified, or sarcastic
Composed	Calm and instrument-panel-like under real technical detail	Flashy, noisy, or trend-chasing
Global-minded	Aware that a candidate in Manila and one in Manchester deserve equal rigour	UK-centric in tone, imagery, or examples by default

01 · BRAND FOUNDATIONS

Relationship to Phexara

Phexara Ltd is the parent company; Vet2Mploy is one of several disciplines and platforms in its portfolio. The relationship is intentionally an endorsed one rather than a merged one: Vet2Mploy stands on its own visual identity, built around its own logo, because its buyers candidates and hiring managers do not need to know or care about Phexara's other work in AI governance, cybersecurity, or adaptive learning. What they do need is the confidence that comes from a credible parent organisation standing behind the platform, particularly for enterprise API partners performing due diligence before they integrate.

The Endorsement Rule

- Vet2Mploy's own logo leads on every candidate- and employer-facing surface: the website, the app, all product screens, all social content.
- A small, consistent “A Phexara Company” or “by Phexara” endorsement mark appears in footers, legal copy, investor and enterprise-sales materials, and the About page never competing for attention with the primary mark.
- Phexara's own colour system (violet, hexagon-phoenix) is never applied to Vet2Mploy surfaces; the reverse is also true Vet2Mploy's cyan-amber-emerald palette does not migrate into Phexara's own master brand.
- Where the two brands must appear together an investor deck, a joint press release the lockup follows the co-branding construction in Section 3.9.

02

Market Positioning

Where Vet2Mploy sits against certificates, coding tests, and internships and why none of them solve the trust problem.

02 · MARKET POSITIONING

Category Definition

Vet2Mploy is best described to a newcomer as a verified-experience platform: a simulated employer environment where candidates complete real tasks under an AI persona manager, are scored by a hybrid deterministic-and-LLM rubric engine, and leave with a Verified Profile that an employer or an enterprise API partner can independently check. It is not a course, not a coding-test vendor, and not a staffing agency, though it borrows a little from each.

The Category It Is Building

No single existing category fully contains what Vet2Mploy does, which is both the opportunity and the communication challenge. The platform sits at the intersection of three older categories and deliberately takes the credible parts of each while discarding the parts that make them untrustworthy or inaccessible:

Older category	What Vet2Mploy keeps	What Vet2Mploy discards
Online courses & certificates (Coursera, LinkedIn Learning)	Structured, role-specific curricula; accessible pricing	Passive consumption as the basis for a credential; no real deliverable
Technical assessment tools (HackerRank, Codility)	Objective, rubric-based scoring under real conditions	Narrow focus on isolated coding puzzles disconnected from a job's full context
Internships & work placements	A simulated employer, real deliverables, real feedback	Reliance on access, geography, and unpaid time that excludes most candidates

The category Vet2Mploy is building a claim to is simplest stated as “verified experience infrastructure” the layer that sits between learning something and being trusted to do it professionally. Category language should always foreground the word verified; it is the single differentiator every audience in Chapter 6 ultimately cares about.

02 · MARKET POSITIONING

Positioning Statement

POSITIONING STATEMENT

For candidates who need to prove ability they haven't had the chance to prove elsewhere, and for employers who need to hire with confidence instead of guesswork, Vet2Mploy is the verified-experience platform that replaces the unverifiable claim with a scored, evidence-backed profile because a simulated role assessed like a real one is more honest than a CV, and faster to trust than a reference call.

Positioning by Audience

The master positioning statement above holds for internal use and investor materials. Each audience needs its own translation Chapter 5 develops these fully; the summary below anchors the logic.

Audience	Positioned against	Positioned as
Candidate	Certificates and unpaid internships	The fastest legitimate way to prove you can do the job, for £19–99/month
Employer	CV screening and generic technical tests	Verified, artefact-backed candidate evidence before the first interview
API Partner	Building an in-house assessment team	Enterprise-grade assessment infrastructure, delivered as an API

02 · MARKET POSITIONING

Competitive Landscape

Vet2Mploy does not compete for attention against one obvious rival; it competes for trust against a scattered set of substitutes a candidate or employer might otherwise reach for. Naming these plainly, internally, keeps the brand honest about where its real advantage sits.

Direct Substitutes

- General technical assessment platforms (HackerRank, Codility, TestGorilla) — strong on isolated technical puzzles, weak on narrative context, non-technical roles, and candidate-owned portable profiles.
- Credentialing and micro-course platforms (Coursera, LinkedIn Learning, various bootcamp certificates) — strong on curriculum structure and brand recognition, weak on producing a real deliverable an employer can independently inspect.
- University career services and traditional internships — strong on legitimacy and depth, weak on access, geography, and speed; effectively unavailable to most candidates outside a narrow window.

Indirect Substitutes

- Portfolio-hosting tools (GitHub, Behance, personal websites) — candidate-controlled, but unscored and unverified; an employer still has to do the evaluation work themselves.
- Reference and background-check services — verify history and conduct, not current-day ability to perform a specific role.
- In-house employer assessment centres — credible, but expensive and slow enough that most employers, especially outside enterprise, do not build them.

Points of Differentiation

1. A persistent AI persona manager, not a static test. The candidate works inside a simulated company with an AI manager who assigns tasks and responds in character — closer to a real first month on the job than a timed quiz.

2. A hybrid scoring engine. A deterministic rubric engine checks structure and required elements; an LLM evaluator adds qualitative narrative feedback per competency dimension. Neither runs alone.

3. A tamper-proof evidence trail. Every submission is hashed and stored; the audit log is not decorative — it is what lets an employer actually trust the score rather than take it on faith.

4. Three-sided distribution. The same simulation engine sells directly to candidates, to employers searching a marketplace of verified profiles, and to enterprise partners via a B2B assessment API — three revenue lines from one verification core.

5. Built for expansion beyond technical roles. The roadmap explicitly plans non-technical disciplines — Digital Marketer, Business Analyst, Product Owner, Brand Strategist, Photographer, HR, Accountant — which most competitors in the technical-assessment space have no credible path toward.

02 · MARKET POSITIONING

Brand Personality in Market

Where Chapter 1 defines personality traits internally, this section positions that personality against the category's existing tone. Most technical assessment tools read as cold and purely transactional; most course and certificate platforms read as encouraging but soft, sometimes to the point of inflating outcomes. Vet2Mploy's positioning is to hold the rigour of the former and the respect for the candidate of the latter, without adopting either one's weaknesses never cold, never soft on evidence.

> **“We are not trying to make hiring feel easy. We are trying to make it honest.”**
>
> **Internal positioning note**

02 · MARKET POSITIONING

Objection Handling

Standard objections should be answered the same way regardless of which team member or agency is fielding them. These are the load-bearing answers; Appendix D expands several into full FAQ form.

“Isn't this just another coding test?”

No a coding test scores a puzzle solved in isolation. Vet2Mploy scores a deliverable produced inside a simulated company, under an AI manager who sets context the way a real manager would, evaluated by both a deterministic rubric and an LLM reading for quality, not just correctness.

“How is an AI-scored profile more trustworthy than a CV?”

Every score traces back to a stored, hashed artefact the actual report, code, or document the candidate produced and a transparent rubric breakdown. A CV traces back to nothing an employer can independently check.

“Won't candidates just game the AI evaluator?”

The deterministic rubric engine runs first and is not influenced by conversational tone; the LLM evaluator reads the same submission the rubric checked. Section 7.2 sets out the safeguards in plain language for external audiences.

“Why would an employer pay a placement fee instead of just hiring off a CV for free?”

Because the cost of a bad hire dwarfs the placement fee, and a Verified Profile removes most of the guesswork a CV leaves behind the employer is paying to de-risk the decision, not to access the candidate.

“Isn't this expensive for a candidate who has nothing?”

Entry tiers start at £19/month specifically so cost is not the barrier internships and university placements represent; Chapter 1's “Rigour Without Gatekeeping” value governs this directly.

03

Visual Identity System

Every colour, typeface, and layout rule in this chapter is derived directly from the supplied Vet2Mploy mark.

03 · VISUAL IDENTITY SYSTEM

The Vet2Mploy Mark

The Vet2Mploy identity begins and ends with the mark itself: a chrome-silver dual-chevron icon, rendered with a soft metallic gradient as if projected as a hologram, paired with a light-weight, wide-tracked wordmark set in mixed case "Vet2Mploy." This chapter takes that supplied lockup as ground truth and derives every other visual decision from it. Nothing in this chapter is inherited from Phexara's own hexagon-phoenix system; where a rule from that master portfolio would conflict with what is shown below, this chapter overrides it for anything carrying the Vet2Mploy name.

Primary lockup, as supplied. Icon and wordmark, dark ground.

Anatomy of the Mark

Element	Description	Rule
Icon	Two chrome-silver chevrons, facing inward, forming a bowtie / dual-arrow silhouette with a soft radial highlight at the centre.	Never separate the two chevrons from one another; always render as a single connected mark, minimum clearspace as set out below.
Wordmark	"Vet2Mploy", light weight, wide letter-spacing, mixed case with a capitalised V and M.	Always this exact capitalisation. Never render as "VET2MPLOY," "vet2mploy," or "Vet2mploy."
Numeral "2"	Set in the same weight, size, and colour as the surrounding letters.	Never superscript, never recoloured, never replaced with the word "to."
Lockup	Icon centred above the wordmark, on a dark ground.	Minimum 40px / 0.4in clear space around the full lockup at all sizes; see Section 3.2.

Why the Icon Endures

The dual-chevron form reads simultaneously as a “V” and an “M” the first and last initials of Vet2Mploy and as two arrows meeting at a centre point, evoking the meeting of two sides of a marketplace: candidate and employer, converging on a single verified point of trust. That double meaning is why the icon can carry meaning on its own, without the wordmark, at favicon size or as an app icon, once the audience has learned the mark through repeated exposure to the full lockup.

03 · VISUAL IDENTITY SYSTEM

Clearspace & Minimum Size

The mark loses legibility fastest through crowding, not through colour error the metallic gradient on the icon needs contrast and breathing room to read cleanly at any size.

Clearspace

Maintain clearspace equal to the height of the icon on all four sides of the full lockup, measured from the outer edge of the chevrons and the outer edge of the wordmark. No other logo, wordmark, photography, or text may enter that space, on any surface digital, print, signage, or apparel.

Minimum Size

Application	Minimum size
Full lockup, print	25mm wide
Full lockup, d	120px wide

Application	Minimum size
igital	
Iconalone(favicon,appicon,socialavat	32px wide, 16px absolute floor

Application	Minimum size
ar)	
Icon alone, print (e.g. embossed on merchandi	8mm wide

Application	Minimum size
se)	

RULE OF THUMB

If the numeral “2” is not clearly a distinct character from the letters around it, the lockup is being used below minimum size. Scale up rather than trying to sharpen it.

03 · VISUAL IDENTITY SYSTEM

Logo Misuse What to Avoid

Every example below has appeared, in some form, in an early draft of a partner deck or a well-intentioned social template. All are incorrect.

- Do not recolour the wordmark to any brand accent colour cyan, amber, emerald, or violet. The wordmark is always Chrome Platinum or Cloud White on a dark ground, or Void Navy on a light ground (Section 3.7).
- Do not apply a drop shadow, bevel, glow, or outer stroke to the icon beyond the metallic gradient it already carries.
- Do not stretch, skew, or rotate the lockup on any axis.
- Do not separate the icon and wordmark into two independent marks used side by side on the same surface without the icon-alone or lockup rules in Section 3.1–3.2.
- Do not place the lockup over a busy photograph without a scrim or solid panel behind it the dark ground the mark was designed against must be preserved or substituted with a solid Void Navy panel.
- Do not translate or transliterate “Vet2Mploy” into another script or spelling for international markets; the Latin wordmark is used globally, with local-language copy surrounding it.

03 · VISUAL IDENTITY SYSTEM

Colour Palette

The palette is built directly from the supplied mark: Void Navy is the exact dark ground the logo sits on; Chrome Platinum is the icon's metallic tone. The three channel accents Signal Cyan, Momentum Amber, Verified Emerald are new to this document, chosen to match the candidate/employer/API-partner colour coding already established in the platform's own architecture and workflow diagrams, so the brand and the product speak the same visual language on day one.

Foundation Colours

SWATCH	NAME / HEX	RGB	PRIMARY USE
	Void Navy #0B1420	11, 20, 32	Primary dark ground for the logo, cover surfaces, and chapter dividers.
	Ink Slate #16233A	22, 35, 58	Secondary dark surface panels, cards, footers on dark backgrounds.
	Chrome Platinum #D9DEE8	217, 222, 232	The icon's metallic tone; wordmark colour on dark grounds.
	Cloud White #F6F8FB	246, 248, 251	Light-mode background for documents, decks, and the marketing site.

Channel Accents

SWATCH	NAME / HEX	RGB	PRIMARY USE
	Signal Cyan Candidate #22C7FF	34, 199, 255	Candidate journey, Candidate App UI, simulation workspace accents.
	Momentum Amber Employer #FFA724	255, 167, 36	Employer Portal, hiring and placement moments, pricing for employers.
	Verified Emerald Trust / API #16E3A4	22, 227, 164	Verified Profile badge, audit and evidence moments, API Partner tier.
	Orchid Intelligence AI Layer #8B6BFF	139, 107, 255	AI persona and LLM-evaluator moments only used sparingly, never as a primary UI colour.

WHY FOUR ACCENTS, NOT ONE

Vet2Mploy is a three-sided marketplace before it is a single product. Giving each side its own accent carried straight through from the platform's own architecture diagrams lets a reader tell at a glance which audience a page, a slide, or a screen is speaking to, without needing a label.

03 · VISUAL IDENTITY SYSTEM

Colour Usage Ratios

A page, screen, or slide should almost always read as roughly 60% Void Navy or Cloud White (depending on light/dark mode), 30% Chrome Platinum or Ink Slate as a secondary neutral, and no more than 10% combined channel accent usually concentrated on one accent at a time rather than all three competing on the same surface.

Surface	Dominant	Secondary	Accent
Marketing site, hero sections	Void Navy (dark mode default)	Chrome Platinum type	One accent matched to the audience being addressed
Candidate App UI	Cloud White / Ink Slate panels	Void Navy text	Signal Cyan for primary actions and progress
Employer Portal UI	Cloud White / Ink Slate panels	Void Navy text	Momentum Amber for primary actions
Verified Profile page (public)	Cloud White	Ink Slate for competency panels	Verified Emerald badge and share elements
Investor / enterprise decks	Void Navy	Chrome Platinum	All three accents may appear together only on the three-sided marketplace diagram

03 · VISUAL IDENTITY SYSTEM

Typography

The wordmark's own letterforms light weight, wide tracking, geometric construction, tall lowercase x-height set the standard the rest of the type system follows. Display type should feel like an extension of the wordmark; body type should disappear in service of legibility, because this is a platform whose credibility rests on dense, technical, and often numerical content (rubric scores, JSON payloads, pricing tables) being read accurately.

Typeface Stack

Role	Production typeface	Word-safe substitute (used in this document)
Display / headlines	Aeonik (or equivalent geometric grotesk)	Century Gothic
Body / UI text	Inter	Calibri
Data, code, and API payloads	IBM Plex Mono	Consolas

Where the production typefaces are unavailable for example, inside this Word document, or on a system without licensed fonts installed the word-safe substitutes above are used, matched for weight and character rather than for exact geometry. Digital product and marketing-site work should always use the production stack.

Type Scale (Digital)

Level	Size	Weight	Use
Display	48–64px	Light / Regular	Hero headlines, chapter dividers
H1	32–40px	Bold	Page and section titles
H2	22–26px	Bold	Sub-section titles
Body	16–18px	Regular	Paragraph copy
Caption / label	12–13px	Bold, wide tracking	Kickers, labels, metadata
Mono / data	14–15px	Regular	Scores, code, JSON, API payloads

Voice of the Wordmark, in Type

Whenever a headline sits directly beneath or beside the logo a hero section, a cover slide, a chapter divider set it with generous letter-spacing and a light-to-regular weight, echoing the wordmark's own tracking, rather than a tight, heavy, ultra-bold treatment. Bold weight is reserved for functional emphasis (a price, a call to action) rather than for headline personality.

03 · VISUAL IDENTITY SYSTEM

Imagery & Environment Style

The supplied brand photography a dimly lit, glass-walled enterprise meeting room, holographic data projections, a presenter addressing a diverse team around a table embedded with interactive surfaces sets the visual register for all Vet2Mploy environment imagery: near-future, credible, corporate, and quietly technological rather than futuristic-fantastical. Photography should feel like a genuine (if slightly heightened) workplace, never like abstract stock-photo optimism.

Photography Principles

- Low-key, navy-toned lighting with cool highlights consistent with the Void Navy ground the logo itself sits on.
- Real work in frame: screens showing dashboards, documents, or code, not empty desks or generic handshakes.
- Diverse, professional casts reflecting the platform's global-by-design value (Section 1.5) no market's imagery should default to a single ethnic or cultural presentation.
- Subtle holographic or projected-data motifs are permitted as an environmental accent (as in the supplied hero image) but should never overwhelm the human subjects in frame.

Illustration & Iconography

Where photography is impractical (small UI moments, presentation diagrams), use simple line-and-fill iconography in Chrome Platinum or a single channel accent against Void Navy or Cloud White never full-colour illustration, never cartoon or mascot-style characters. The three-sided marketplace diagram from the platform's own architecture materials (Candidate / Employer / API Partner, each colour-coded) is the reference model for how a system diagram should look under this identity.

03 · VISUAL IDENTITY SYSTEM

Accessibility & Contrast

Because Vet2Mploy is built on a dark-ground identity, contrast discipline matters more here than in a typical light-mode brand system. Every combination in production use must meet WCAG 2.1 AA at minimum for body text (4.5:1) and AA for large text and UI components (3:1).

Foreground	Background	Approx. contrast	Verdict
Chrome Platinum (D9DEE8)	Void Navy (0B1420)	≈ 14.8:1	Pass primary body text on dark
Void Navy (	Cloud Whit	≈ 15.5:1	Pass primary body text on light

Foreground	Background	Approx. contrast	Verdict
0B1420)	e(F6F8FB)		
SignalCyan(22C7FF)	VoidNavy(0B1420)	≈5.2:1	Pass for UI text and large text; verify for small body copy
MomentumAmb	VoidNavy(0B	≈5.9:1	Pass for UI text and large text

Foreground	Background	Approx. contrast	Verdict
er (FFA724)	1420)		
VerifiedEmerald (16E3A4)	CloudWhite (F6F8FB)	≈1.8:1	Fail for text accent/badge use only, never as text colour on light backgrounds

PRACTICAL RULE

Any accent colour may be used for icons, borders, badges, or large numerals. For body text, only Chrome Platinum on Void Navy, or Void Navy / Ink Slate on Cloud White, are approved combinations.

03 · VISUAL IDENTITY SYSTEM

Dark Mode & Light Mode Variants

Dark mode is the native register the logo was designed in and is the default for marketing, brand, and investor contexts. Light mode exists for product surfaces where long-form reading dominates the Verified Profile page, the Employer Portal's candidate search results, printed reports and for accessibility preference.

Context	Default mode	Logo treatment
Marketing site, brand decks, social	Dark	Full lockup as supplied Chrome Platinum wordmark on Void Navy
Candidate App, Employer Portal (product UI)	Light, with dark-mode toggle	Icon-only mark in navigation, full lockup on splash/loading states
Verified Profile (public share page)	Light	Icon-only mark, small, top-left; Verified Emerald badge carries the trust signal
Printed reports, invoices, contracts	Light	Full lockup rendered in Void Navy on white, never in colour

03 · VISUAL IDENTITY SYSTEM

Co-Branding with Phexara

Vet2Mploy's own mark leads on every audience-facing surface. Phexara's endorsement appears only where organisational credibility genuinely matters to the reader: investor and enterprise-sales materials, legal and compliance documents, the corporate About page, and footers site-wide.

Lockup Construction

- Vet2Mploy mark is always the larger, primary element never resized to visually equal Phexara's mark.
- A thin vertical hairline in Ink Slate or 30% Chrome Platinum separates the two marks, with “a Phexara company” or “by Phexara” set in small caps beside or beneath Phexara's mark.
- Never merge the two colour systems into a single new palette; each mark keeps its own colours exactly as defined in its own portfolio.
- On Vet2Mploy's own dark-mode surfaces, Phexara's endorsement lockup should be rendered in a single neutral tone (Chrome Platinum) rather than in Phexara's own violet, to avoid two accent systems competing on one page.

WHEN IN DOUBT

If a piece of collateral is aimed at a candidate or an individual employer, Phexara likely does not need to appear at all beyond a legal footer line. If it is aimed at an investor, an enterprise buyer's procurement team, or a press outlet evaluating the parent company, the endorsement lockup should appear.

04

Brand Voice & Tone

One voice, calibrated differently for a nervous candidate, a sceptical employer, and a technical procurement team.

04 · BRAND VOICE & TONE

Voice Principles

Vet2Mploy's voice is built to survive translation across three audiences with very different stakes in the conversation, without ever sounding like three different companies. Four principles hold that together.

Plain before clever

Say what the platform actually does before reaching for a metaphor. “Complete a real simulated task, get scored, get a verified profile” beats any tagline that requires explanation.

Specific over superlative

Replace “best-in-class” and “revolutionary” with the actual mechanism a rubric criterion, a stored artefact, a response time because specificity is itself evidence, and evidence is the whole brand.

Respectful of the candidate's position

A candidate arriving at Vet2Mploy is often anxious about being judged. The voice never mocks, never gamifies failure, and never implies a low score reflects a person's worth.

Confident, not urgent

Employer- and partner-facing copy earns trust through composure, not countdown timers or manufactured scarcity rigour does not need to shout.

04 · BRAND VOICE & TONE

Tone by Context

Voice stays constant; tone shifts with context the way a person's tone shifts between a job interview and a catch-up with a friend, without becoming a different person.

Context	Tone	Example
Candidate onboarding	Warm, clear, a little encouraging	“You're about to step into a simulated cybersecurity team. Your manager will set the brief take the time you need to get it right.”
Candidate low score / feedback	Direct, respectful, forward-looking	“Two of four rubric criteria passed. Your incident summary was strong; the remediation section needs more specific next steps. Here's what a stronger version would include.”
Employer marketing	Confident, evidence-led	“Every profile you review is backed by a stored, hashed deliverable not a claim on a CV.”
API partner / enterprise sales	Technical, precise, unembellished	“POST to /api/assessment/trigger with a candidateEmail and roleId. You'll receive a signed webhook with per-dimension scores once the simulation completes.”
Incident or service disruption	Calm, transparent, accountable	“Scoring for cybersecurity-track submissions was delayed for 40 minutes today due to an upstream API issue. No submissions were lost; all affected candidates have been re-notified.”

04 · BRAND VOICE & TONE

Language Guidelines

Preferred Language

- “Verified Profile” — the core artefact, always capitalised as a proper term in customer-facing copy.
- “simulation” or “simulated role” — never “game” or “challenge”, which undersell the realism the product is built on.
- “score” and “scoring” — plain, specific; avoid “grade”, which carries an academic connotation the brand is deliberately moving away from.
- “AI persona manager” or “persona” — never “bot” or “chatbot”, which undersell the realism of the in-character interaction.
- “Employer” and “candidate” as the primary nouns — avoid “user” in customer-facing copy except in strictly technical documentation.

Language to Avoid

- “Guaranteed hire” or any language implying the platform controls an employer's hiring decision.
- “Certified” or “certificate” to describe the Verified Profile — it is not a course-completion credential.
- “Gamified”, “playful”, or “fun” as descriptors of the assessment experience itself — the simulation should feel real, not like a game, even when individual UI moments are polished and satisfying to use.
- Superlatives without a mechanism attached (“best scoring engine”) — replace with the specific mechanism (“a deterministic rubric engine paired with an LLM evaluator”).
- “VEEP” in any customer-facing surface, per Section 1.1.

04 · BRAND VOICE & TONE

A Worked Before-and-After Example

Before

"VEEP is the revolutionary new way to get certified in tech skills through fun, gamified challenges that will guarantee you stand out to employers and land your dream job fast!"

After

"Vet2Mploy puts you inside a simulated cybersecurity, engineering, or data team, working real tasks under an AI manager. Your work is scored by a rubric engine and an AI evaluator, then bound to a Verified Profile you can share directly with employers evidence they can check, not a claim they have to take on faith."

WHAT CHANGED

Removed "revolutionary," "fun," "gamified," and "guarantee." Replaced the vague "get certified" with the specific mechanism (simulated team, AI manager, rubric plus AI evaluator). Named the actual deliverable the Verified Profile instead of a vague "stand out."

04 · BRAND VOICE & TONE

Voice Audit Checklist

Before publishing any Vet2Mploy copy a landing page, an email, a social post, an in-app message run it against this checklist.

- Does every claim trace back to something the platform can actually demonstrate (a rubric, a stored artefact, a specific process)?
- Would a nervous first-time candidate feel respected reading this, even if their own score were low?
- Is “Verified Profile” used correctly and capitalised, rather than substituted with “certificate” or “badge”?
- Does the tone match the context table above encouraging for onboarding, direct for feedback, confident for employer and partner copy?
- Has “VEEP” been fully replaced with “Vet2Mploy”?
- Are there any unearned superlatives that should be replaced with a specific mechanism instead?

05

Messaging Architecture

The master tagline, three audience value propositions, and messaging by funnel stage.

05 · MESSAGING ARCHITECTURE

Master Tagline & Supporting Statement

> **MASTER TAGLINE**
> Experience, Verified.

Supporting statement, for use wherever the tagline needs one extra sentence of context: “Vet2Mploy turns simulated work into proof employers can trust.”

Tagline Usage

- The master tagline sits beneath or beside the full lockup on covers, hero sections, and chapter dividers set in italics or light weight, never bold, echoing the wordmark's own lightness.
- The supporting statement is used in meta descriptions, email subject-line follow-ups, and anywhere the tagline alone would be too compressed to orient a first-time reader.
- Audience-specific taglines (below) may replace the master tagline on audience-specific landing pages, but never on the homepage or in the primary lockup.

Audience Taglines

Audience	Tagline
Candidate	“Prove it before they hire you.”
Employer	“Hire the evidence, not the guesswork.”
API Partner	“Verification, delivered as infrastructure.”

05 · MESSAGING ARCHITECTURE

Discipline-Level Messaging: The Three Sides of the Marketplace

Each side of the marketplace needs its own complete value proposition, proof points, and call to action not a re-skinned version of the others. All three trace back to the same brand essence (Section 1.7): proof of work, for work.

Candidate

Value proposition: “Gain real, simulated work experience in the role you want, scored the way an actual manager would score it, and leave with a profile you can put directly in front of employers.”

Proof Points

- Role catalogue spans technical disciplines at launch (Cybersecurity, Software Engineering, Cloud) with non-technical roles arriving from Month 5 (Digital Marketer, Business Analyst, Product Owner, Brand Strategist, Photographer, HR, Accountant).
- Simulation workspace includes a real code editor, BI tooling, and document environment not a multiple-choice quiz.
- Entry pricing from £19/month, positioned explicitly against the cost and access barriers of an unpaid internship.

Call to Action

“Register and choose your first role.”

Employer

Value proposition: “Search a pool of candidates who have already completed real, scored work in the discipline you're hiring for, and review the actual deliverables behind every score before you book a first interview.”

Proof Points

- Filter by role, region, and competency score across the full candidate pool.
- Review the artefact portfolio behind every score not just a number.
- Placement fee triggers only on a completed hire, aligning cost with outcome.

Call to Action

“Search verified candidates in your discipline.”

API Partner

Value proposition: “Trigger a full Vet2Mploy assessment for any candidate directly from your own hiring workflow, and receive a signed, structured score report you can act on immediately.”

Proof Points

- A single REST call (POST /api/assessment/trigger) starts a complete simulation and scoring cycle for a named candidate.
- Every webhook payload is HMAC-SHA256 signed, with time-limited signed URLs to artefact evidence.
- Tiered pricing from £500/month (up to 50 assessments) to custom enterprise terms with SLA and SSO.

Call to Action

“Integrate verified assessment into your hiring stack.”

05 · MESSAGING ARCHITECTURE

Trust & Verification Messaging

Because “verified” is the single word every audience is ultimately buying (Section 1.7), messaging about how verification actually works deserves its own consistent language, used the same way across candidate marketing, employer marketing, and partner technical documentation.

Mechanism	How it's described externally
SHA-256 hashing of every submission	“Every deliverable is fingerprinted the moment it's submitted, so it can never be altered after the fact.”
Deterministic rubric engine	“A fixed, transparent checklist of what a strong submission includes applied identically to every candidate.”
LLM qualitative evaluator	“A second, independent read for quality and reasoning, layered on top of the rubric not a replacement for it.”
Tamper-proof audit log	“A complete, unchangeable record of how a score was reached, available to the employer reviewing it.”
Signed webhook payloads (API)	“Every score report your systems receive is cryptographically signed, so you can verify it came from Vet2Mploy unaltered.”

05 · MESSAGING ARCHITECTURE

Messaging by Funnel Stage

Stage	Candidate message	Employer message
Awareness	“There's a way to prove you can do the job before anyone gives you the job.”	“Most CVs are a claim. What if you could hire against evidence instead?”
Consideration	“Choose a role, see exactly how it's scored, see what a Verified Profile looks like.”	“See how the rubric and evidence trail work before you commit to a search.”
Decision	“Register and start your first simulation today, from £19/month.”	“Start searching verified candidates, or trigger your first API assessment.”
Retention / advocacy	“Your Verified Profile updates with every new role you complete keep building it.”	“Track every placement and its outcome in your Placement Tracker.”

05 · MESSAGING ARCHITECTURE

Sample Copy for Key Surfaces

Homepage Hero

“Experience, Verified. Vet2Mploy puts you inside a real simulated role, scores your work like a real manager would, and gives you a profile employers can actually trust. Choose a role and start today.”

Employer Landing Page

“Stop screening CVs. Start reviewing evidence. Every candidate on Vet2Mploy has completed real, scored simulated work in your discipline and you can see the deliverable behind every score before you book an interview.”

API Partner Landing Page

“Building an assessment team from scratch is slow and expensive. Vet2Mploy's Assessment API gives you the same verified-experience engine, triggered directly from your own applicant-tracking workflow, with signed, structured results delivered on completion.”

Candidate Onboarding Email (excerpt)

“Welcome to your first simulation. Your AI manager will brief you shortly take the time you need to understand the task before you start. There's no clock counting down, and no single wrong way to approach it. What matters is the deliverable you produce.”

06

Audience Strategy

Three sides of one marketplace, mapped by segment, region, and journey.

06 · AUDIENCE STRATEGY

Primary Audience Segments

Vet2Mploy's marketplace has three distinct buyer types. Each is treated as a full segment with its own needs, objections, and success metric never as a variation on a single generic “user” persona.

Segment 1 The Candidate

Attribute	Detail
Who	Job seekers early in a discipline, career-changers, and candidates without access to internships or strong professional networks.
Primary need	A credible, affordable way to demonstrate real ability to an employer who has never met them.
Core anxiety	Being judged unfairly, wasting money on something that doesn't actually help, or being scored by an opaque system.
Success metric	Verified Profile completed and shared with at least one employer within 30 days of registration.
Brand touchpoint priority	Onboarding tone, AI persona feedback quality, transparency of the Profile Viewer.

Segment 2 The Employer

Attribute	Detail
Who	Hiring managers and small-to-mid-size employer teams hiring for roles in Vet2Mploy's covered disciplines.
Primary need	Reduce the risk and time cost of a bad hire by seeing evidence before interviewing.
Core anxiety	Paying a placement fee for a candidate who doesn't perform as the score suggested.
Success metric	At least one completed hire via Vet2Mploy within the first search cycle.
Brand touchpoint priority	Candidate Search filtering, artefact portfolio review, placement fee transparency.

Segment 3 The API Partner

Attribute	Detail
Who	Enterprise HR and talent-acquisition teams with an existing applicant-tracking system, and staffing or recruitment platforms seeking assessment infrastructure.

Attribute	Detail
Primary need	Add credible, structured assessment data into an existing workflow without building an internal assessment function.
Core anxiety	Reliability and security of a third-party API embedded in a business-critical hiring process.
Success metric	Successful integration and sustained monthly assessment volume within the contracted tier.
Brand touchpoint priority	API documentation clarity, webhook payload trust signals, SLA and security messaging.

06 · AUDIENCE STRATEGY

Regional Considerations

The platform's own roadmap sequences market entry deliberately UK first, then Canada and Australia from Month 3 and the brand's global-by-design value (Section 1.5) means cultural context is built into the candidate journey from day one rather than retrofitted.

Market	Entry point	Brand consideration
United Kingdom	Beta launch market, Month 1	Primary reference market for tone, spelling (UK English throughout), and initial employer partnerships.
Canada	Market entry from Month 3, alongside employer/B2B launch	Cultural Onboarding step (Section 6.3) must reflect Canadian workplace norms distinctly from UK defaults, not as a minor variant.
Australia	Market entry from Month 3	Same principle as Canada distinct cultural onboarding content, not a reskin.

A Note on Sequencing New-Market Entry

Brand and content teams should treat each new-market entry as requiring its own review pass against the Word & Phrase Style Sheet (Appendix E) and the Cultural Onboarding content in the candidate journey not simply a currency and spelling swap. The platform's own Market Entry Layer injects region-specific cultural configuration into every simulation; the brand's regional content should carry the same discipline.

06 · AUDIENCE STRATEGY

Buyer Journey Touchpoint Map

The candidate journey below is drawn directly from the platform's own architecture (Discovery through Placement) and mapped to the brand touchpoint and emotional register each stage should carry.

Stage	Candidate does	Emotional register	Brand touchpoint
01 Discovery	Finds Vet2Mploy via landing page, un	Curious	Homepage hero, role catalogue browser

Stage	Candidate does	Emotional register	Brand touchpoint
	iversitypartner,orwaitlist		
02Onboardi	Registersv	Motivated	Onboarding copy, Cultural Onboarding brief

Stage	Candidate does	Emotional register	Brand touchpoint
ng	iaOAuth, selectsroleandregion		
03 Simula	Receives	Challeng	AI persona tone, simulation workspace UI

Stage	Candidate does	Emotional register	Brand touchpoint
tion	task from AI manager, works in-tool	ed	
04 Eval	Rubric	Confid	Feedback language, transparency of scoring breakdown

Stage	Candidate does	Emotional register	Brand touchpoint
uation	and AI evaluator scores the submission	ent (if handled well)	
05 Pr	Veri	Pro	Profile Viewer design, share mechanics

Stage	Candidate does	Emotional register	Brand touchpoint
ofile	fiedProfileURLgeneratedartefactstor	ud	

Stage	Candidate does	Emotional register	Brand touchpoint
	ed		
06 Placement	Employer views profile, interview init	Hired	Employer-facing profile presentation, placement confirmation messaging

Stage	Candidate does	Emotional register	Brand touchpoint
	iated, hirecompleted		

THE EMOTIONAL ARC IS THE BRAND'S REAL KPI

Curious → Motivated → Challenged → Confident → Proud → Hired is not incidental colour it is the sequence every piece of candidate-facing copy, UI microcopy, and AI persona response should be written to support. A candidate who leaves the Evaluation stage discouraged rather than confident has broken the brand promise, regardless of their score.

07

Product & Experience Branding

The Verified Profile, the simulation workspace, and the pricing tiers are brand surfaces, not just UI.

07 · PRODUCT & EXPERIENCE BRANDING

The Verified Profile as Core Brand Artefact

If Vet2Mploy has a single object that carries the brand furthest into the world without any marketing spend attached to it, it is the Verified Profile: a URL a candidate sends directly to an employer, with no Vet2Mploy salesperson in the room to explain it. Every design and copy decision on that page should assume it may be the very first thing a hiring manager ever sees of the brand.

What the Verified Profile Must Communicate in Five Seconds

1. This is verified, not self-reported the Verified Emerald badge and a visible link to the underlying evidence trail.
2. This is specific, not generic a competency radar broken into the actual dimensions scored, not a single vague number.
3. This is inspectable an Artefact Gallery an employer can actually open, not a locked PDF.
4. This is current a visible completion date and role name, so an employer knows exactly what was assessed and when.
5. This is shareable a clear, brandable URL structure (vet2mploy.com/profile/[id]) rather than an opaque tracking link.

Visual Treatment

Light mode, Cloud White background, Void Navy text, with the competency radar and artefact viewer using the candidate's own channel Signal Cyan as the primary accent, and the Verified Emerald badge reserved specifically for the verification mark itself so it is never confused with a generic UI accent.

07 · PRODUCT & EXPERIENCE BRANDING

Naming Conventions for Roles, Screens & Features

Consistent, brand-approved naming across the product's own screen architecture prevents the drift that happens when engineering, design, and marketing each invent their own shorthand for the same feature. The table below is the single source of truth; where an internal engineering document (for example, the VEEP architecture materials) uses a different internal name, the customer-facing name below always wins for anything a candidate, employer, or partner will see.

Internal/engineering name	Customer-facing brand name
VEEP	Vet2Mploy
Verifiedpr	VerifiedPr

Internal/engineering name	Customer-facing brand name
profileURL	profile
SimulationWorkspace	Workspace
AI	AI

Internal/engineering name	Customer-facing brand name
PersonaService	Manager
RubricEngine+LL	theVet2MployScore

Internal/engineering name	Customer-facing brand name
MEvaluator(combined)	re
CulturalO	GettingSt

Internal/engineering name	Customer-facing brand name
nboardingbrief	artedin[Region]
AssessmentAPI/	Vet2MployAsses

Internal/engineering name	Customer-facing brand name
B2B API Product	smentAPI
Placement fee	HireSuccessFee

WHY THIS TABLE MATTERS

Internal/engineering name	Customer-facing brand name

> A candidate should never encounter the word “rubric engine” or “VEEP” anywhere in the product. Internal engineering language is fine in Jira, Slack, and architecture docs; it must be translated before it reaches a customer-facing string, an email template, or a support macro.

07 · PRODUCT & EXPERIENCE BRANDING

Pricing Tier Branding

Pricing communicates positioning as much as any tagline does. Each tier below is named and framed to match the audience segment it serves (Chapter 6), not as a generic “Basic / Pro / Enterprise” ladder.

Audience	Tier structure	Framing
Candidate	£19–99/month	Framed against the true cost of an unpaid internship or a bootcamp certificate accessible by design, not discounted as an afterthought.
Employer	£399/month + Hire Success Fee	Framed as a subscription to search plus a fee tied to an actual outcome, never a flat recruiter-style commission with no evidence behind it.
API Partner	Starter £500/mo (50 assessments) · Growth £1,500/mo (200 assessments) · Enterprise (custom, unlimited, SLA + SSO)	Framed as infrastructure pricing predictable, volume-based, enterprise-standard SLA and security language front and centre.

Language Rule for Pricing Pages

Every pricing page states plainly what changes between tiers role access, assessment volume, support level and never implies that a higher tier produces a more favourable or inflated score. Section 1.4's “Evidence Over Claims” value applies directly here: pricing may gate access and volume; it must never appear to gate honesty.

07 · PRODUCT & EXPERIENCE BRANDING

Branding the AI Manager Experience

The AI Manager is the single most personal touchpoint a candidate has with the brand a sustained, in-character conversation, not a one-off message. Its personality should be a direct extension of the brand voice principles in Chapter 4: plain, specific, respectful, and composed, expressed through the lens of a believable, professional line manager rather than a generic assistant.

- The AI Manager should be written to sound like a competent, fair manager in the specific simulated discipline a cybersecurity AI Manager reads differently from a brand-strategy AI Manager, but both stay within brand voice.
- Feedback from the AI Manager should always separate what was strong from what needs work, and should reference the rubric criteria in plain language rather than exposing raw internal scoring mechanics.
- The AI Manager never breaks character to reference being an AI system mid-simulation in a way that undermines the realism the product is selling, but nothing about the experience should ever mislead a candidate about the nature of the simulation if they ask directly.

07 · PRODUCT & EXPERIENCE BRANDING

Data & API Surfaces as Brand Surfaces

An enterprise partner's engineers will judge Vet2Mploy's credibility partly on the quality of its API documentation and payload design a technical audience reading raw JSON is still reading the brand. Field names, error messages, and documentation tone should carry the same discipline as marketing copy.

Sample Webhook Payload (Brand-Reviewed)

```
assessmentId:   "uuid-v4"
```

(See Appendix C for the full formatted sample payload and accompanying commentary.)

Documentation Tone

- API documentation is written in second person, present tense, and avoids marketing language entirely "Send a POST request to…" not "Simply harness the power of…"
- Error messages name the actual problem and the actual fix, never a generic "something went wrong."
- Every field in a payload is documented with its purpose, not just its type consistent with the Radical Transparency in Scoring value (Section 1.4).

08

Channel Application

How the identity translates to the website, sales collateral, social, signage, and recruitment.

08 · CHANNEL APPLICATION

Website

The marketing site is the first full expression of the identity most candidates and employers will encounter, and should run dark-mode by default in its hero and top-level navigation, shifting to light-mode content panels as the page moves into detailed, text-heavy sections (pricing detail, FAQ, documentation).

Page	Primary accent	Key brand elements
Homepage	Rotates across all three channel accents as the page scrolls through each audience	Full logo lockup in nav, hero headline in display type, three-sided marketplace diagram
Candidate landing	Signal Cyan	Role catalogue preview, candidate tagline, entry pricing
Employer landing	Momentum Amber	Candidate search preview, employer tagline, placement fee transparency
API Partner landing	Verified Emerald	Sample webhook payload, pricing tiers, technical documentation link
Verified Profile (public)	Verified Emerald badge only, light mode throughout	Icon-only mark, competency radar, artefact gallery

08 · CHANNEL APPLICATION

Sales, Proposal & Investor Collateral

Investor and enterprise sales materials are the primary context in which the Phexara endorsement lockup (Section 3.9) appears, and the only context in which all three channel accents may legitimately share a single slide typically on the three-sided marketplace overview slide.

- Cover and section-divider slides follow the same dark-ground, chrome-icon, wide-tracked-type treatment as this document's own chapter dividers.
- Data-heavy slides (architecture, roadmap, pricing) move to a light or Ink Slate mid-tone background for legibility, with a single accent per slide matched to the audience being discussed.
- Every metric quoted in investor materials MRR targets, pricing, cost per candidate must match the platform's own current roadmap and pricing exactly; brand and product teams reconcile before any investor deck update ships.

08 · CHANNEL APPLICATION

Social & Professional Media

Vet2Mploy's social presence should read as a credible, technically literate voice in the hiring and careers conversation closer in register to a well-run enterprise SaaS account than to a consumer careers-influencer account.

Platform	Primary use	Tone
LinkedIn	Employer and API partner audience, thought leadership on verified hiring	Confident, evidence-led, occasional data/insight posts drawn from platform trends
Instagram / short-form video	Candidate audience, day-in-the-life simulation content, success stories	Warm, specific, real candidate voices wherever possible
X / technical communities	API partner and developer audience	Direct, technical, minimal marketing language

Visual Template Rule

Social templates carry the icon-only mark (never the full lockup at small social sizes unless the post is square and large enough to preserve minimum size), a single channel accent per post matched to the audience, and Chrome Platinum or Void Navy type never a rainbow mix of all four accent colours on one asset.

08 · CHANNEL APPLICATION

Physical Environment & Signage

Physical presence conference booths, university partnership signage, office environments should echo the supplied brand photography's register: low-key navy lighting, chrome accents, real work visibly in progress rather than empty, staged environments.

- Booth and signage backgrounds default to Void Navy with the full lockup lit or backlit, echoing the holographic quality of the source photography.
- University partnership materials (recruitment stands, printed leaflets) may use a lighter Cloud White treatment for cost and print-legibility reasons, with the icon-only mark and a single accent colour.
- Office signage at any Vet2Mploy or Phexara facility follows the co-branding rule in Section 3.9 for shared spaces.

08 · CHANNEL APPLICATION

Recruitment Communications

As Vet2Mploy hires its own team through the same seven-month build described in the platform's roadmap, recruitment materials should demonstrate the brand's own standards in miniature a job posting is itself a piece of Vet2Mploy copy and should be held to the same voice principles as any candidate-facing material.

Pre-Launch Channel Checklist

- Careers page live before first external job posting goes out, using the full brand system rather than a generic ATS template.
- Job descriptions written in Vet2Mploy voice plain, specific, respectful avoiding generic “rockstar” or “ninja” language that would contradict the brand's own rigour-without-hype positioning.
- Interview process for Vet2Mploy's own hires should, where practical, model the evidence-over-claims value the product itself is built on.

08 · CHANNEL APPLICATION

Sample Content Calendar Themes

A rolling content calendar should map roughly to the platform's own seven-month build roadmap, so marketing content always has real product news to anchor to rather than manufacturing generic “career tips” content unrelated to what is actually shipping.

Month	Product milestone	Content theme
M1–M2	Foundation + threat-technical roles l	“Inside the simulation” behind-the-scenes of the AI Manager and rubric engine

Month	Product milestone	Content theme
	ive, beta cohort	
M3	Employer portal + API Asses	Employer-facing launch content, first case studies from beta employer partners

09

Brand Governance

A governance model built for a platform that ships a new role, market, or pricing tier roughly every four weeks.

09 · BRAND GOVERNANCE

Governance Principles

Vet2Mploy's roadmap is fast by design a new role or region roughly every four weeks through Month 7. A governance model built for an annual brand refresh would collapse under that pace. Governance here is deliberately lightweight, front-loaded into clear rules (this document) rather than back-loaded into a slow approval committee.

- Default to the rules in this document without escalation for anything that is a straightforward application of an existing pattern (a new role's Verified Profile page, a new social post following the established templates).
- Escalate only genuinely new decisions a new pricing tier structure, a new market's entire visual treatment, any request to use the VEEP name customer-facing, any request to alter the core mark itself.
- Review, don't relitigate. A completed decision (this portfolio's five founding decisions, Executive Summary) is not reopened casually; changing it requires the same founder-level sign-off that created it.

09 · BRAND GOVERNANCE

Brand Maturity Roadmap

Brand governance should mature in step with the product roadmap rather than in a separate, disconnected timeline.

Phase	Product state	Brand governance focus
M1–M2 Foundation	Beta, 3 roles, £0 revenue	Lock the core system (this document); train the small founding team directly.
M3–M4 Employer + Launch	Public launch, first paying candidates and employers	Onboard first external agencies using Appendix F; establish social and content cadence.
M5–M6 Non-Technical Expansion	Broader role catalogue, £1k–10k MRR	Stress-test the identity across a much wider content and channel footprint; run first brand health check (below).
M7 Enterprise + Series A	Enterprise API live, Series A prep	Full co-branding review with Phexara for investor materials; formalise RACI below for a larger team.

09 · BRAND GOVERNANCE

Brand Health Checklist

Run this checklist at each roadmap phase boundary (M2, M4, M6, M7) rather than on a fixed calendar date, so review effort scales with actual product change.

- Is the VEEP name fully absent from every customer-facing surface, including newly launched roles and regions?
- Do all newly launched role pages and Verified Profile variants follow the colour, type, and imagery rules in Chapter 3 without drift?
- Has any new pricing tier or region been reviewed against the Word & Phrase Style Sheet (Appendix E) rather than copy-pasted from an existing market?
- Are the three channel accents (cyan, amber, emerald) still used consistently to their assigned audience across the newest content produced?
- Has any escalation-tier decision (Section 9.1) been made without founder-level sign-off?

09 · BRAND GOVERNANCE

Brand Governance RACI

Decision	Responsible	Accountable	Consulted	Informed
New role page / Verified Profile variant	Design lead	Head of Product	Brand/Marketing	Founders
New social content within existing templates	Content/Social lead	Head of Marketing		Founders
New pricing tier structure	Head of Product	Founders	Brand/Marketing, Legal	All teams
New market visual treatment	Design lead	Founders	Regional lead, Brand/Marketing	All teams
Any change to the core mark, colour system, or naming	Founders	Founders	Design lead, Phexara brand team	All teams, agencies

09 · BRAND GOVERNANCE

Brand Risk Register

Named risks, kept live and reviewed at each phase boundary rather than written once and forgotten.

Risk	Why it matters	Mitigation
VE Name persistsin a customer-facing sur	Undermines the single-name clarity the who	Brand Health Checklist run at every phase boundary; search-and-flag pass across all live copy before each major launch

Risk	Why it matters	Mitigation
face after launch	lepositioningdependson	
Employer trust erodes	EmployerTrustisthep	Any product change to scoring mechanics triggers a brand-and-product joint review before external messaging updates

Risk	Why it matters	Mitigation
if a score is later shown to be gameable	platform's stated moat (Section 1.4)	
Rapid non-	Core early	New non-technical roles held to the same rubric-plus-LLM standard and same visual system, explicitly messaged as extending rigour rather than relaxing it

Risk	Why it matters	Mitigation
technical role expansion dilutes the platform's	trust was built on rigorous technical assessment	

Risk	Why it matters	Mitigation
technical credibility		
Co-branding drift with P	Confused parent/produc	Section 3.9 lockup rules enforced by design lead sign-off on all investor and enterprise materials

Risk	Why it matters	Mitigation
hexaraa investor material scale	tbranding underminesboth	
New-market	Contradicts	Regional Considerations (Section 6.2) requires a distinct review pass per market, not a template swap

Risk	Why it matters	Mitigation
ntry treated as a copy-paste of UK content	the Global by Design core value (Section 1.4)	

10

Source Material & Document Control

Where every rule in this document came from, and how this document itself is maintained.

10 · SOURCE MATERIAL

Source Material

This portfolio was built from the following source materials, cross-referenced against one another so that brand language never contradicts the underlying product architecture.

Source	What it contributed
Vet2Mploy logo and hero image (supplied)	The primary mark, colour ground, and photography register the entire visual identity system (Ch.3) is built around.
Phexara Brand Strategy Portfolio v2	Structural template for this document's organisation and governance model not colour, typography, or naming.
VEEP Architecture Google Slides	Three-sided marketplace structure, candidate journey stages, six-layer system architecture, pricing tiers, and seven-month build roadmap referenced throughout Chapters 5–9.
VEEP Knowledge Graph Design (GCP)	Confirmed platform naming conventions and confidentiality classification referenced in Document Control.
VEEP Workflow Analysis with Cloud Comparison	Supporting technical and operational context for Chapter 7's product-branding decisions.

Colour Extraction Method

Void Navy and Chrome Platinum were extracted directly from the supplied logo lockup as the dominant dark ground and metallic icon tones. The three channel accents were newly defined for this portfolio to match the existing colour coding already present in the platform's own architecture materials (cyan for Candidate, amber/gold for Employer, green/emerald for API Partner), so the brand and the product interface reinforce one another rather than introducing a second, competing colour language.

10 · SOURCE MATERIAL

Document Control

Version	Date	Change
0.1	Internal draft	Initial structure adapted from Phexara Brand Strategy Portfolio v2
1.0	July 2026	First approved edition full visual identity built around the Vet2Mploy logo; complete messaging, audience, product-branding, channel, and governance chapters

Ownership & Review Cadence

- Owned by: Phexara Ltd, Brand & Marketing, in partnership with Vet2Mploy product leadership.
- Reviewed at each roadmap phase boundary per the Brand Maturity Roadmap (Section 9.2), and immediately upon any escalation-tier decision per the Governance RACI (Section 9.3).
- Next scheduled review: Month 4 (public launch) phase boundary.

A

Glossary of Terms

Plain-language definitions of every named term used across this portfolio.

APPENDIX A · GLOSSARY

Glossary of Terms

Vet2Mploy

Phexara's verified-experience platform, formerly known internally by the codename VEEP.

Verified Profile

The tamper-proof, URL-shareable candidate record generated after a simulation, backed by stored evidence artefacts and a transparent competency score.

AI Manager

Customer-facing name for the platform's AI persona service the in-character LLM-driven manager who assigns tasks and responds within a simulation.

Vet2Mploy Score

Customer-facing name for the combined output of the deterministic rubric engine and the LLM qualitative evaluator.

Simulation / Workspace

The environment a candidate works within to complete a role's assigned tasks includes a code editor, BI tooling, and document environment as relevant to the role.

Hire Success Fee

Customer-facing name for the placement fee an employer pays on a completed hire sourced through Vet2Mploy.

Vet2Mploy Assessment API

The B2B product allowing enterprise partners to trigger a full assessment cycle for a named candidate via a REST API and receive a signed webhook report.

Three-sided marketplace

The structural description of Vet2Mploy's business model: Candidate, Employer, and API Partner, each transacting through the same verification core.

Channel accent

One of the three audience-specific colours (Signal Cyan, Momentum Amber, Verified Emerald) used to visually distinguish Candidate, Employer, and API Partner content.

Cultural Onboarding

The candidate-journey step in which region-specific workplace-culture context is presented before a simulation begins.

Endorsement lockup

The co-branding construction used when Phexara's own mark must appear alongside the Vet2Mploy mark (Section 3.9).

B

Quick Reference Card

The entire portfolio, condensed to a single working reference.

APPENDIX B · QUICK REFERENCE

Quick Reference Card

Name

Vet2Mploy never VEEP, customer-facing. Exact capitalisation always.

Tagline

“Experience, Verified.”

Colour at a Glance

SWATCH	NAME / HEX	RGB	PRIMARY USE
	Void Navy #0B1420	11, 20, 32	Primary dark ground
	Chrome Platinum #D9DEE8	217, 222, 232	Icon tone, wordmark on dark
	Signal Cyan #22C7FF	34, 199, 255	Candidate
	Momentum Amber #FFA724	255, 167, 36	Employer
	Verified Emerald #16E3A4	22, 227, 164	Verification / API Partner

Typography at a Glance

Role	Typeface
Display/Headings	Aeonik (Century Gothic in Word)
Body/UI	Inter (Calibri in Word)
Data/Code	IBM Plex Mono (Consolas in Word)

The Five-Second Brand Test

Would a nervous first-time candidate feel respected? Does every claim trace to real evidence? Is the correct channel accent used for the correct audience? If any answer is no, the asset is not ready to ship.

C

Sample Materials

A proposal statement, a social post, and a full webhook payload.

APPENDIX C · SAMPLE MATERIALS

Sample Materials

Proposal Cover Statement (Employer Sales)

> *"You review CVs today because that's what's available. Vet2Mploy gives you something better: evidence. Every candidate you search has completed real, scored, simulated work in your discipline and you can open the deliverable behind every score before you ever pick up the phone."*
>
> Vet2Mploy Employer Proposal Template

Social Media Post (LinkedIn, Employer Audience)

"A CV tells you what someone says they can do. A Verified Profile shows you what they actually did scored, evidenced, and ready to review. That's the difference Vet2Mploy makes to your next hire. → vet2mploy.com/employers"

Full Sample Webhook Payload

```
{
  "assessmentId": "3f1c9e2a-...",
  "candidateId": "9b2d7f10-...",
  "roleId": "cybersecurity-analyst",
  "completedAt": "2026-07-14T09:12:00Z",
  "scores": [
    { "dimension": "Report Quality", "score": 82, "max": 100 },

}
```

Note field names, plain-language dimension labels, and the signed evidence URL all consistent with the Data & API Surfaces guidance in Section 7.5.

D

Frequently Asked Questions

Answers to the questions most often raised when first working with this portfolio.

APPENDIX D · FAQ

Frequently Asked Questions

Can I still call the product VEEP in internal engineering tickets?

Yes. VEEP remains an acceptable internal engineering codename in Jira, architecture documents, and Slack. It must never appear in anything a candidate, employer, or API partner can see.

Which typeface is mandatory for the website?

The production stack (Aeonik / Inter / IBM Plex Mono) is used for all digital product and marketing-site work. The Word-safe substitutes in Section 3.6 are for documents only, such as this portfolio.

Can Verified Emerald ever be used for body text?

No. Section 3.7's contrast table shows it fails accessibility contrast on light backgrounds. It is reserved for badges, icons, and large accents only.

Do all three channel accents ever appear together?

Only on the three-sided marketplace diagram and equivalent overview materials (Section 8.2). Any single audience-facing page uses one accent.

What do I do if a new role needs a name not covered in the naming table?

Follow the pattern in Section 7.2 translate the internal engineering name into a plain, customer-facing equivalent, and add it to that table for future reference.

Who approves a genuinely new brand decision not covered here?

Escalation-tier decisions follow the RACI in Section 9.3 founder-level sign-off is required for anything touching the core mark, naming, or colour system.

How does this document relate to the Phexara master brand portfolio?

This document is authoritative for anything carrying the Vet2Mploy mark; Phexara's master portfolio governs the parent organisation and other Phexara disciplines. See Section 1.6.

E

Word & Phrase Style Sheet

A lookup table of preferred and avoided word and phrase choices.

APPENDIX E · STYLE SHEET

Word & Phrase Style Sheet

Avoid	Use instead
VEEP	Vet2Mploy
certificate / certified	Verified Profile / verified
chatbot / bot	AI Manager
Grade	score
game / challenge (for a simulation)	simulation / simulated role
guaranteed hire / guaranteed job	verified evidence employers can trust
user (customer-facing copy)	candidate / employer / partner
revolutionary / best-in-class (unsupported)	the specific mechanism being described
placement fee (customer-facing)	Hire Success Fee
rubric engine (customer-facing)	the Vet2Mploy Score

F

New Agency & New Hire Onboarding Checklist

A standalone checklist for anyone producing Vet2Mploy-branded work for the first time.

APPENDIX F · ONBOARDING

New Agency & New Hire Onboarding Checklist

Before Producing Any Asset

- Read Chapter 1 (Brand Foundations) and Chapter 3 (Visual Identity System) in full.
- Confirm access to the current logo asset pack and the colour palette in Section 3.4.
- Identify which audience (Candidate / Employer / API Partner) the asset is speaking to, and select the correct channel accent.
- Check the Word & Phrase Style Sheet (Appendix E) for any terms specific to the asset's subject matter.

Before Publishing Any Asset

- Run the Voice Audit Checklist (Section 4.6).
- Confirm the logo meets minimum size and clearspace rules (Section 3.2).
- Confirm no VEEP references remain anywhere in the asset, including alt text, file names, and metadata.
- For anything touching pricing, scoring, or API documentation, have a product-team reviewer confirm technical accuracy before publishing.

Who to Ask

Question type	Ask
Visual identity / logo usage	Design lead
Voice, tone, or copy review	Head of Marketing / Brand
Product accuracy (pricing, scoring, roadmap)	Head of Product
Anything touching the core mark, naming, or colour system	Founders

First-Week Reading Order

1. Executive Summary
2. Chapter 1 Brand Foundations
3. Chapter 3 Visual Identity System
4. Chapter 4 Brand Voice & Tone
5. Appendix B Quick Reference Card (keep this open while working)
